

The proper steps to set up AWS CLI on Ubuntu 22.04, as per your file, are:

Step 1: Update Your System

1. Open a terminal.
2. Run:
3. `sudo apt update`

Step 2: Install AWS CLI

1. Install AWS CLI using:
2. `sudo apt install awscli`
3. Confirm the installation by typing Y when prompted.

Step 3: Configure AWS CLI

1. Run:
2. `aws configure`
3. Provide the following details when prompted:
 - **AWS Access Key ID**
 - **AWS Secret Access Key**
 - **Default region name** (e.g., us-west-2)
 - **Default output format** (Press Enter to use json)

Step 4: Verify Installation

1. Run:
2. `aws ec2 describe-instances`
3. If it returns information about your EC2 instances, AWS CLI is configured correctly.
